Function Curation

This is a copy of customizable function for future use.

Metadata

In order to add metadata to each note you should create a table with two columns: “name” and “value”. Like this:

name	value
location	Barcelona
description	Loosely organized thoughts on my preferred work process
date	2022-10-13
tags	work, process

There are several optional metadata properties that you can specify:

- *location* - location where the content was created. E.g. ‘New York’.
- *description* - short description of the content.
- *date* - date of the creation. Format YYYY-MM-DD. E.g. ‘2022-07-15’
- *tags* - comma separated tags/keywords.
- *language* - two letter language code.
    - *RTL* - left to right text orientation.

You can add any additional metadata property that you consider valuable.

Special Note’s Metadata

name	value	description
pinned	yes/no (Default: no)	Pin the note to the top of the collection page.
showInFooter	yes/no (Default: no)	Show the note in the footer navigation and remove it from the default navigation.
author	Name of the author	Name of the author if site has multiple authors. For each author you need to create page in “authors” folder inside your site.
emoji	Default: none	You can add emoji property and it will be used as favicon for this page. Use single emoji only.
date	Default: Apple note date	Date when this note was originally created. Useful if you published it before creating Apple Note.
slug	Default: from title	If you don't like generated URL slugs for your notes, you can specify custom one.
showBreadcrumbs	yes/no (Default: no)	Show folder name before the Note title.
showInMenu	yes/no (Default: yes)	Show note in the main list/menu.
showNoteNavigation	yes/no (Default: no)	Show links to the previous and next notes.
showNoteFooter	yes/no	Show global footer on each Note's page.

showNoteFooter	yes/no (Default: yes)	Show global footer on each Note's page.
showNoteMetadata	yes/no (Default: no)	Show metadata on Note's page.
dateFormat	Default: YYYY-MM-DD	Format of dates on the note page.
fontFamily	Default: helvetica	Other values "sans-serif", "avenir", "athelas", "georgia", "times", "bodoni", "calisto", "garamond", "baskerville"
fontSize	Default: 16px	Any value.
backgroundColor	Default: white	Use hex code.
textColor	Default: black	Use hex code.
titleColor	Default: black	Use hex code.
codeHighlight	yes/no (Default: no)	Highlight monospace text as code.
hideFooterLinks	Default: no	Hide all the links in footer.
hideHeader	Default: no	Hide the header of the page.

Special Collection's Metadata

Home page and any folder page are considered "collection" pages. If you want to customize behavior of collection create special note called "index"(in the root of your site or for each specific folder as you wish).

name	value	description
title	Default: collection name	Set custom collection title that is different from the folder name.
showChildren	yes/no (Default: yes)	If set to "no" it will disable rendering of links to the notes and folders inside this collection.
sortBy	title/update/create (Default: create)	Sort notes by create date, updated date or title.
RTL	yes/no (Default: no)	If set to "yes", the text in all the notes in this folder will go right to left.
showBreadcrumbs	yes/no (Default: no)	Show folder name before the Note title.
showInMenu	yes/no (Default: yes)	Show folder in the main list/menu.
showNoteNavigation	yes/no (Default: no)	Show links to the previous and next notes.
showNoteFooter	yes/no (Default: yes)	Show global footer on each Note's page.
showNoteMetadata	yes/no (Default: no)	Show metadata on Note's page.
dateFormat	Default: MMM D, YYYY	Format of dates on the preview pages.
fontFamily	Default: helvetica	Other values "sans-serif", "avenir", "athelas", "georgia", "times", "bodoni", "calisto", "garamond", "baskerville"
fontSize	Default: 16px	Any value.
backgroundColor	Default: white	Use hex code.
textColor	Default: black	Use hex code.
titleColor	Default: black	Use hex code.
listItemTitleColor	Default: black	Use hex code.

openExternalLinksInNewTab	Default: no	If set to "yes" will force all external links to be opened in new tab.
layout	List, feed, grid, table(Default: timeline)	Layout option that dictates how notes should be shown on the folder/collection page. By default they are show as a list.
hideFooterLinks	Default: no	Hide all the links in footer.
hideHeader	Default: no	Hide the header of the page.
linksUnderlined	Default: no	Underline links.
resetHeaderStyle	Default: no	Use it to remove special formatting for titles and breadcrumbs.
resetBoxStyle	Default: no	Use it to reset styles for next/prev post boxes and newsletter subscribe box.
newsletterSubscribeButton	Default: Subscribe	Customize subscribe button text.
newsletterSubscribeCallToAction	Default: Sign up for newsletter	Customize subscribe input text.
noteNavigationStyle	Default: none	If you set "showNoteNavigation" to 'yes' navigation will be shown as boxes at the bottom of the page. If you set it to "arrow" - it will show up as two arrows at the top.
width	Default: none	If you want layout to spread and take 100% of the page set it to "wide".

Metadata is merged this way: note's metadata takes precedence over folder's metadata and folder's over site's.
